

Buckets and Piastrella

FERRACIN
GROUP

PLASTIC SYSTEMS FOR THE
BUILDING INDUSTRY

Buckets

FERRACIN GROUP, always with a view to research and development of innovative and technological solutions in plastics, offers a complementary range of products suitable for different construction needs.

Features and Advantages

SECCHIO TOP is the top of the line article in builders' buckets. Is the safest, accident preventing, practical and durable, made of PE. It has a diameter of 36 cm and a galvanised handle of 7 mm.

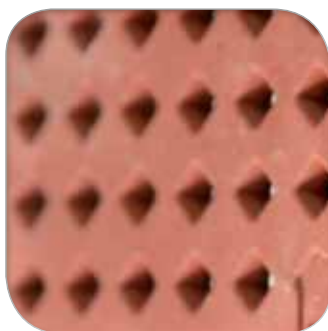

Thanks to its lateral "box" it hides the curled end of the handle so as to avoid it catching on anything.

Is available in blue, but on request it can be made in any colour and can be customised with the client's brand.

SECCHIO PLUS is the middle article in the line of builders' buckets. It is accident preventing, practical and very durable, made of PE. It has a diameter of 36 cm and a galvanised handle of 7 mm.

Is available in red and yellow, but on request it can be made in any colour and can be customised with the client's brand.

Piastrella

PIASTRELLA is the plastic solution to create internal and external flooring, in a practical and fast way. The modules are lightweight and their installation is extremely simple thanks to the self-blocking joint. Removal of the flooring is equally quick, and it can be reused later. **PIASTRELLA**, measuring **20x40x5.5 cm** in height, can be shaped easily when necessary, without the cut modules losing stability. Each element has a perforated surface to ensure **perfect drainage**. The manufacturing material gives high levels of **resistance to compression, resistance to wear and tear due to the weather and attack by chemical agents**.

This type of flooring is particularly suitable on the flat waterproofed coverings to protect the waterproof layer and the layer of insulation, or in cases of covers such as the "inverted roof" to protect them and make them safe to walk on. In preserving the covering layer "PIASTRELLA" also contributes to **improving the overall thermal resistance and sound absorption of the entire covering package**.

Colours

PIASTRELLA is produced in TERRACOTTA, GREY and GREEN.

Applications

The possible applications are numerous, in addition to those mentioned above. **PIASTRELLA**, is perfect for creating outdoor paved areas, but its use in interiors is not excluded, given its attractive appearance and ease of cleaning.

In addition, the speed of installation / removal make it an intelligent solution for the execution of provisional flooring, as in the case of events.

- AREAS OF SPORTS CENTRES AND SWIMMING POOLS
- AREAS OF BATHING ESTABLISHMENTS AND CAMPSITES
- STREET FURNITURE
- TERRACES OF BARS AND RESTAURANTS
- TRADE FAIRS AND EXHIBITION AREAS
- GARDENS, TERRACES AND BALCONIES
